BA INSIGHT

LONGITUDE CONNECTORS
For SharePoint, FAST, and Search Server

UNLOCK AND CONNECT CRITICAL SYSTEMS

Securely Extend SharePoint & FAST Search to Over 30 Enterprise Systems

Longitude Connectors securely integrate over thirty enterprise systems into Microsoft SharePoint and FAST Search, providing knowledge workers with a single point of access to all information, people, and expertise across the enterprise.

With rapid and cost-effective out-of-the-box deployment, comprehensive security-mapping, and full Active Directory integration, Longitude Connectors maximize the ROI of an organization's ERP, CRM, ECM, and messaging systems by securely unlocking and surfacing this information in a unified view.

Robust   Empower FAST or SharePoint Search to surface any structured or unstructured data from virtually any content repository

Flexible   Index only the back-end system content you desire, and present it to end-users in the manner they demand

Secure   Swiftly map and strictly honor any security model

Scalable   Optimized for multi-threaded, fully-distributed performance

ERP, CRM and Custom Systems
- Aderant
- Microsoft Dynamics
- Oracle E-Business Suite
- PeopleSoft / Siebel
- Salesforce.com / Force.com
- SAP Business Suite
- LexisNexis Interaction CRM
- OpenText LegalKEY
- Oracle RDBMS / SQL Server / DB2
- Real Practice
- Web Services
- West KM

ECM and Document Management Systems
- EMC Documentum
- IBM FileNet / Content Manager / DB2
- IBM Lotus Notes Application Databases
- Autonomy Worksite
- OpenText Hummingbird / LiveLink
- Oracle CMS / Stellent
- Alfresco
- Xerox DocuShare
- HP Trim Context (TowerSoft)

Messaging and Collaboration Systems
- EMC eRoom
- Microsoft Exchange Private Mailboxes
- Symantec KVS E-Vault
- IBM Lotus Notes Mailboxes

LONGITUDE CONNECTORS
Features and Benefits

BA INSIGHT

RAPID DEPLOYMENT

Longitude Connectors can be deployed and configured quickly, providing organizations with a means to surface all enterprise content easily, regardless of format or location.

SWIFT DEVELOPMENT

Longitude's code-free, wizard-driven SQL and Web Service API connection framework enables development of new, fully secure connectors on demand.

UNPARALLED SECURITY CAPABILITIES

Longitude translates identities and security schemas from any non-Active Directory based system, and also optionally enables real-time security checking to ensure rigorous adherence to all permission and access protocols.

COMPREHENSIVE METADATA MANAGEMENT

Wizard-based metadata mapping and scripting capabilities provide precise control of your metadata. Quickly merge metadata from multiple systems based on common keys to create a single, data rich record.

SIMPLE SETUP AND CONFIGURATION

Longitude provides wizard-based setup and a dynamic test-bench to evaluate all proposed configurations, making connecting to back-end systems much faster, transparent, and less prone to human error than any other method.

VAST SCALABILITY

Longitude prepares a calculated change log that tracks all deltas occurring since the previous crawl. By only indexing these items, connected systems are prevented from being over-burdened by repeated queries, while crawl speeds are optimized.

SUPPORTED MICROSOFT TECHNOLOGIES

- Microsoft SharePoint 2010
- FAST Search Server for SharePoint 2010
- Microsoft Office SharePoint Server 2007
- Microsoft Search Server 2008/2010 & Express

Featured Connector:
EXCHANGE CONNECTOR FOR PRIVATE MAILBOXES

- *Rapidly index all email, tasks, notes, attachments and contacts*

- *Enable super users and groups to search against all mailboxes in order to meet compliance objectives and internal security protocols*

- *Instantly preview and act upon all Exchange email and attachments directly in the search user interface*

Longitude enables the comprehensive search and instant preview of all emails across the organization. Longitude automatically detects, loads, and indexes mailboxes on a fully customizable schedule, providing near real-time scope, while granular security mapping enables Administrators to provide a diversity of access permissions to individual or discrete groups of users.

Ensuring Diligent Compliance and Responsive Legal Discovery

To succeed in today's highly competitive marketplace, organizations must be able to systematically meet regulatory obligations, efficiently respond to legal requests, and facilitate internal best practice reviews – all without over-burdening staff or system resources. Critical to this is the ability to comprehensively assess email communications for relevance, and deliver relevant content to appropriate parties. Longitude enables organizations to securely index and search Exchange Private Mailboxes, and instantly preview all results – including attachments. With the benefit of dynamic hit highlighting and graphical hit mapping, Administrators can quickly locate and compile any information related to a Compliance or Discovery event.
