

Keys to Success

ISOTONIC PROTECTION THROUGH ELECTROLYTES

Before activation, the beneficial probiotic bacteria are in a dormant state. Bacteria is activated when exposed to moisture, at this fragile time they can over hydrate and die.

Hypertonic

Dormant hypertonic state

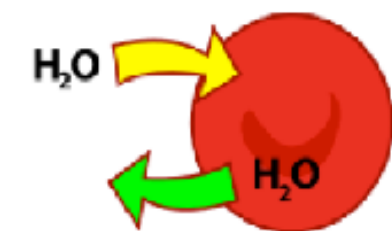

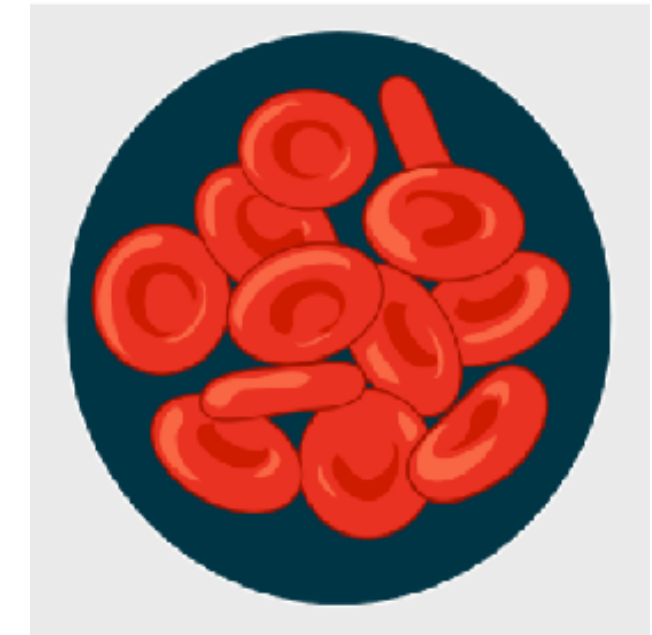

Hypotonic

Bacteria can over-hydrate and die

MAKTrek 3D®'s proprietary blend of key electrolytes create an isotonic and balanced fluid state, increasing survival rates of the probiotics.

Isotonic

Activation with balanced hydration
