

Why do I need a SaaS Management platform?

The growth in usage of SaaS applications has expanded the number of software used by organizations and decentralized the software procurement process across teams and departments - resulting in challenges across organizations.

- Wasted/duplicate SaaS spend
- Slow employee onboarding process
- Incomplete employee offboarding
- Unknown apps and ad hoc processes
- Security and compliance risks

Companies rely on SaaS tools to run their organization and empower employees to be efficient and effective. The massive adoption of these tools has created a rather unruly IT ecosystem that is decentralized and hard to track. Below is real data for a typical small business.

What is Blissfully?

Blissfully is a platform that offers end-to-end SaaS management across your vendors and employees. Our goal is to help scaling companies manage the challenges resulting from the proliferation of SaaS applications with a collaborative platform across different stakeholders including: IT, Finance, HR, Team Leads, and Employees.

Key Features in Blissfully

Automated detection and tracking

Good management starts with complete information. Discover and track every app being used in your organization. Establish a source of truth that always stays up to date.

Spend analysis and optimization

See the full picture of your SaaS spending. Blissfully automatically keeps your spend data up to date through integrations with your financial systems, email invoice detection, and SSO usage information.

Comprehensive employee lifecycle management

Onboarding, offboarding, requests, approvals, and more. Blissfully automatically executes what it can, and triggers notifications for everyone that has an open task. Regular reminders make sure everything gets done.

Robust vendor management

The average mid-size company uses over 100 SaaS vendors. Managing approvals, renewals, and compliance for all of these vendors could be a full-time job. Blissfully makes it easy to manage everything related to those vendors, in one place.

Compliance system of record

SOC 2, GDPR, ISO 27001, and more. Stay on top of compliance with a system of record for all your SaaS applications that always stays up to date with Blissfully's SaaS codex.

How it Works:

Blissfully has a series of direct integrations to detect a company's SaaS stack. Our API with GSuite combined with an accounting integration (currently Quickbooks, Xero, NetSuite and Intaact) will provide visibility that will replace any current system or process to track usage and spend. We also integrate with SSO (Okta, OneLogin, Google, SAML) to leverage these stats and keep a pulse on usage.
