iSecurity Solutions

WHAT IS REMOTE ACCESS TO MY IBM i?

Usually a TCP application

    FTP
    TELNET
    ODBC from word, excel, etc.
    DDM (distributed data management)
    SQL
    Remote command

Connectivity via
    dial-up, broadband ,wireless, Ethernet, token ring

REMOTE ACCESS TO MY IBM i

- activities are not recorded by QAUDJRN

BUT the results might be. This could often be misleading

![iSecurity - System i Security Solutions]

iSecurity Solutions

so how DO I monitor and control remote access to my

IBM i

iSecurity Firewall

What Can I do about Local Activity?

![iSecurity — System i Security Solutions]

Local Activity On MY IBM i

- Activity generated from a command line, menu, or batch job,

- monitored with OS400's QAUDJRN

- Connectivity via
    5250 protocol connected via twinax
        not very popular anymore
        workstation
        dumb terminal
        non-intelligent workstation

    5250 Emulation over telnet or web session
        IBM Navigator
        IBM PCOMM
        Intelligent Workstation (PC) or server etc.

IBM 3486 Terminal, a later terminal with 5250 functionality, capable of supporting two independent sessions concurrently, and with an amber screen. The original 5251-1 had a much smaller keyboard.[1]
