Migration to SharePoint

Organized, Efficient, and Stress-Free Migration to SharePoint

Microsoft SharePoint is rapidly becoming the standard platform for organizations seeking a centralized knowledge repository and collaborative workspace. Flexible, reliable, and user-friendly, SharePoint has become a vital tool for all those seeking to connect and empower their workforce.

DocAve Migrator modules provide an efficient and cost-effective solution for migrating business-critical content from various electronic repositories into Microsoft SharePoint. DocAve's innovative and reliable data transfer is unique in its ability to granularly migrate content down to individual items while retaining all associated metadata. This lets SharePoint administrators easily automate the process of consolidating multiple content sources into SharePoint, as well as maximize return on investment for content residing in legacy repositories.

DocAve Supports the Following Data Sources:

Microsoft SharePoint	SharePoint 2001/2003 ▶ SharePoint 2003/2007/2010
Public Folders	Exchange Public Folders ▶ SharePoint 2003/2007/2010
File Systems	File Systems ▶ SharePoint 2007/2010
Documentum eRoom	Documentum eRoom ▶ SharePoint 2007/2010
EMC Documentum	EMC Documentum ▶ SharePoint 2007/2010
Lotus Notes	Lotus Notes ▶ SharePoint 2007/2010 Exchange 2007/2010
Open Text LiveLink/Vignette	Livelink/Vignette ▶ SharePoint 2007/2010
Oracle/Stellant	Oracle/Stellant ▶ SharePoint 2007/2010

With truly centralized administration, all migration tasks can be easily setup, scheduled, and monitored from a single browser-based interface. DocAve enables the co-existence of both the SharePoint platform and all legacy content sources during the migration process. This means data migration can be performed flexibly, according to business needs and deployment schedules. No special hardware is required to deploy the DocAve platform — it can run within your existing infrastructure.

Business Advantages

- **Minimize the effort required to deploy Microsoft SharePoint**
DocAve Migrator transfers content from legacy repositories to Microsoft SharePoint in an organized and efficient manner. This improves IT productivity and reduces the time-to-value for deploying SharePoint as a standard collaboration platform.
- **Protect investments and mission-critical information**
Business-critical information residing in legacy content sources is kept intact. Folder structures, attachments document properties, and all associated metadata are retained with full fidelity. End-users can confidently continue to access their content without interruption.
- **Flexible deployment & scheduling**
Migrate an entire instance or just an individual content item. Reorganize, remap, and create new folders upon migration to clean up existing clutter. Granular or bulk content migration and flexible job scheduling empowers administrators to plan migration jobs according to business needs and other organizational timetables, reducing negative impact on production environments.
