

End User Computing Workshop

Using an EUC framework to evaluate inter-related goals and technologies

Following the release of windows 10, organizations are re-examining the desktop and how it delivers applications. The proliferation of applications necessitates a strategy for consistent end user computing. Now that IT and business decisions are more inter-related, decision makers must balance the goals of individual strategies and projects to create a cohesive environment that meets their needs. Each organization has unique considerations for security, compliance, mobility, and cost. This workshop teaches you how to evaluate technology needs using an EUC framework.

Workshop Objectives

Understand and apply the EUC Framework to your organization

Identify operational strengths, weaknesses, and risks

Articulate your business objectives

Don't compromise your security

Identify appropriate technologies and services to meet those objectives

Map existing relationships between desktop and the data center

We will provide you with a customized executive summary with recommendations for the most impactful initiatives for your business.

Schedule your EUC workshop today 212-645-5070 | info@ipm.com

Why you need this workshop

The business IT environment is more interconnected than ever. It's difficult to identify all the potential problems in a complex situation when planning new initiatives, services, or technologies. This workshop provides a framework to examine your environment and confidently make recommendations and decisions.

Understanding the EUC framework

The EUC framework is designed to take a 50,000-foot view from the perspective of the business, IT, and the end user. It will consider technologies, service providers, operations, and business and project risks. We bring all of that together to identify a potential direction, gaps, and next steps for IT decision makers.

We'll walk you through important considerations for servers, storage, networking, virtualization software, cloud providers, systems management, security, mobility, personalization and more.

By understanding the EUC framework, participants will be able to create a timeline for project implementations with milestones as well as provide direction and inform existing and future initiatives.
