The Joint Action intends to promote the use of RRI methodologies to support the design and creation of smart eHealth solutions, helping monitoring physical and emotional wellbeing using digital services.

- **Purpose:** Identify, collect and share good practices applying RRI methodologies for the creation of smart eHealth and healthy living / wellbeing products and services.
- **Starting point:** Use cases and successful examples of smart technologies used to support eHealth and healthy living in particular.
- **Target Groups:** Companies delivering smart eHealth and healthy living products and services, as well as market studies providers.
- **Outcomes:** Evidence of the effect of RRI methodologies in anticipating future challenges of smart eHealth products adoption and acceptance.
- **Impacts:** Better understanding of the benefits of applying RRI in the design of smart eHealth on prevention, healthy living and wellbeing.
