

High Performance Translating Lens!

METRO-SEG®
CRESCENT BIFOCAL

Advanced Design. Simple Success.

The Metro-Seg translating lens is designed for patients that demand ultra crisp distance and near vision. Crescent-shaped add zones provide the Metro-Seg with unique performance features to satisfy the most demanding vision requirements. The numbers couldn't be clearer, 40% of the patients that walk through the average Eye Care Practitioner's door are in the age range for presbyopia. Having a GP translating lens design that you can rely on is fundamental to success.

Metro-Seg's unique performance qualities:

- Ultra Crisp Vision at all focal depths
- Unlimited Add Power
- Smooth image translation
- Large Add Power Zone

No fitting set is required for the Metro-Seg and it can be easily fit empirically from the patient's basic exam information.

For patients with significant astigmatism, Metro-Seg can be made with toric parameters.

Start with the best, forget the rest, and achieve success!

Metro Optics...Always Ahead of the Curve

The Metro Optics Advantage

- Simple Warranty/Return Policy
- Free Standard Shipping
- Free Plasma Treatment on all GP Lenses
- Free Dot on GP Lenses
- Free Minus Lenticular

"One of the most difficult challenges for any practitioner is to undertake the prescribing of contact lenses for those who are overly particular about their vision.

What started out as a seemingly difficult task has instead been made much less so through the successful fitting of my wife with the Metro-Seg Crescent lenses."

William L. Miller, OD, PhD
Director, Cornea and Contact Lens Service
University of Houston College of Optometry
