Controlled Guest WiFi Solutions

www.CheckBoxSystems.net   866.345.9434

Feature Comparison	HSOne	HSv210	HSv4	HSv5
Supports wired & wireless users	Y	Y	Y	Y
Recommended maximum number of concurrent users	20	100	100+	Hundreds
Typical maximum system throughput	15Mb	100Mb+	50Mb+	300Mb+
Supports multiple ISP connections with automatic failover			3 connections	7 connections [1]
Captive portal—a welcome page all guests are brought to automatically	Y	Y	Y	Y
Splash Page & redirect after guests log in	Y	Y	Y	Y
Open domain list - create a list of websites guests can access anytime	Y	Y	Y	Y
Multiple guest authentication options:				
Supports free access users	Y	Y	Y	Y
Supports ticketing for users	Y	Y	Y	Y
Permacode option	Y	Y	Y	Y
Credit card/PayPal support		Y	Y	Y
API to allow integration with loyalty cards/guest cards/POS systems	Y	Y	Y	Y
Tier access options	Y	Y	Y	Y
Integrated 802.11G/B access point	Y			
VPN Support for guests to access their corporate networks	Y	Y	Y	Y
Compatible with NX meshing access points		Y	Y	Y
Client-to-client isolation supported	Y	Y	Y	Y
Client usage policy (bandwidth shaping & throttling)	Y	Y	Y	Y
Torrent inhibiting controls - prevents guests from using excessive bandwidth	Y	Y	Y	Y
System firewall	Y	Y	Y	Y
Management VPN, no static or public IP needed, no port forwarding required [2]	Y	Y	Y	Y
Can operate outside of company network for PCI /HIPAA compliance	Y	Y	Y	Y
Web based administrative tools	Y	Y	Y	Y
Cloud-based remote access for off-site management via computer, smartphone or tablet[2]	Y	Y	Y	Y
Bandwidth and system usage history		Y	Y	Y
Text/email notification of outages [2]	Y	Y	Y	Y
UPnP Supported	Y	Y	Y	Y
Single SSID for seamless roaming	Y	Y	Y	Y
Support for static clients	Y	Y	Y	Y
Automatic software updates [2]	Y	Y	Y	Y
Self configuring and self correcting mesh architecture		Y	Y	Y
Client-to-client security isolation supported	Y	Y	Y	Y
Compatible with external content filtering services	Y	Y	Y	Y
Rack Mountable				Y
Extended Hours Support available	Y	Y	Y	Y
24/7 Live Guest Support available	Y	Y	Y	Y

Provide Wireless Internet access to your guests and customers with CheckBox

Check Box is a powerful system that combines a gateway, router and wireless controller in one box that can scale to manage hundreds or thousands of wireless and wired clients simultaneously. You can even manage multiple separate locations from anywhere. The on-board access management allows you to control who can use your internet connection and for how long.

All Systems Include:

✓ Industry leading U.S. based Support

✓ Customizable Welcome Page

✓ Private Management Screens

✓ Money back warranty of Satisfaction

✓ Web based administrative tools

✓ 1 year of remote access for off-site management

✓ 1 Year of Automatic Software Upgrades

✓ 1 Year Hardware Warranty

✓ 1 year of phone support for you & your staff

✓ 1 Year of 24/7 monitoring w/text or email notifications of outages

Optional 24/7 live toll free guest support available.
Optional extended hardware warranty available.
*More features listed on the back*

With CheckBox you can provide WiFi & controlled Internet access for your customers & guests.

Your customers and guests connect to the network wirelessly with their own smartphones, tablets or laptops or through wired ports, or at PCs that you provide. Your guest will automatically be redirected to a login page that prompts them to log in. This login page features your graphics, company logo, branding and any messages you want to express to your customers and guests. You determine how they log in: with an access code you provide, by clicking a button with your terms and conditions, with a credit card or with your brand loyalty card.

After logging in users will then see a message confirming their access, also featuring your graphics, logo, branding or message, and then they are free to connect to the internet. You can also have them automatically redirected to your company web or social media page. From there they can surf web pages, use apps and other online services.

You can provide a free access or a limited time trial button on the welcome page to allow users online without a ticket, and/or use the included credit card module to allow users to purchase time with a major credit card right on the welcome page - great for unattended areas like marinas, RV resorts, parks etc. CheckBox can even integrate with your loyalty rewards program to give Internet access to loyalty card holders.

Behind the scenes your CheckBox automatically monitors guest usage and activity, controlling bandwidth, monitoring your access points and limiting guest's access when their time is up. CheckBox can be used with any internet connection such as Cable, DSL, Fiber, T1 or Satellite.

✓No required monthly fees
✓You keep 100% of the revenue
✓You determine what or if to charge
✓No Annual Licensing Fees or Contracts

checkbox has cost effective solutions for any size property

CheckBox powers WiFi in Coffee Shops Cafés & Restaurants Marinas Campgrounds Hotels Conference Centers Schools Office Parks Food Courts Shopping Malls Office Suites Truck Stops Visitor Centers Airports and more

The CheckBox HSOne is a completely self-contained stand alone guest Internet solution, ideal for cafés, coffee shops, restaurants, bed & breakfasts, automotive repair facilities, laundromats, waiting areas and smaller venues. With everything you need built into one compact unit providing WiFi to your customers and guests set up could not be simpler.

The CheckBox HSV5 is a complete guest Internet solution for larger properties that need maximum bandwidth. The HSV5 utilizes multiple high speed Internet connections (up to 7 with an optional expansion card).

When using multiple Internet connections the HSv5 will load balance across all connections with automatic detection of available connection bandwidth and provides automatic failover if an ISP connection fails.

Ideal for larger properties including motels, hotels, marinas, resorts, school campuses, apartment and condominium communities and other venues that need maximum bandwidth for their guests.

The CheckBox HSV210 is a self-contained guest Internet solution, designed for motels, inns, restaurants, bars, marinas, function halls and more.

The HSV210 supports one high speed Internet connection and dozens of wired and wireless meshing access points to provide robust connectivity to your customer and guests.

CheckBox Meshing Access Points

CheckBox NX meshing access points are the next generation of wireless technology. Delivering up to 250% more bandwidth than previous generations of meshing access points, the NX series of access points have the power to deliver more bandwidth and more speed to more users.

CheckBox Meshing Access Points can be run wired or wirelessly allowing you to expand your network without running additional cabling.

CheckBox Meshing Access Points are designed to work with CheckBox Gateway Master controllers providing integrated and unified control of your system. With CheckBox Meshing Access Points all system parameters are set from the administrative screens of your CheckBox controller; no need to log into individual access points to set IP addresses, channels, SSIDs and meshing modes. Set parameters from one screen and all changes propagate automatically to all of the nodes in your system.

With CheckBox controllers and CheckBox meshing access points your system can support a unified SSID - one single network name for your guests to make roaming between access points seamless.

CheckBox meshing access points are available in outdoor and indoor configurations and utilize passive Power-over-Ethernet to simplify wiring (includes Power-over-Ethernet adapter/power injector).

The CheckBox HSV4 guest Internet solution is ideal for small and mid-sized properties that need to combine multiple ISP connections for more bandwidth or require redundancy against ISP failures.

The HSV4 supports up to three Internet connections and can load balance across all connections with automatic detection of connection bandwidth and provide automatic failover if an ISP connection fails.

CheckBox also features the NX900, a dedicated long range link that can wirelessly connect access points at distances of up to two miles. The NX900 is managed like other CheckBox access points, with automatic configuration and management from the CheckBox Gateway Master controllers.
