

# ECOSYSTEM CYBER RISK SCORECARD

Automatically see, prioritize and act on cyber threats.

## ECOSYSTEMS MULTIPLY YOUR CYBER RISK

Your 3rd party vendors have access to confidential information, intellectual property and critical systems. That means your sensitive data is only as secure as your partners' cyber security capabilities.

Deloitte puts the cost of not managing this risk at \$2 - \$50 million in fees and compensation, not to mention the damage to your reputation. Companies need to be able to assess the risk of their 3rd party providers quickly and accurately.

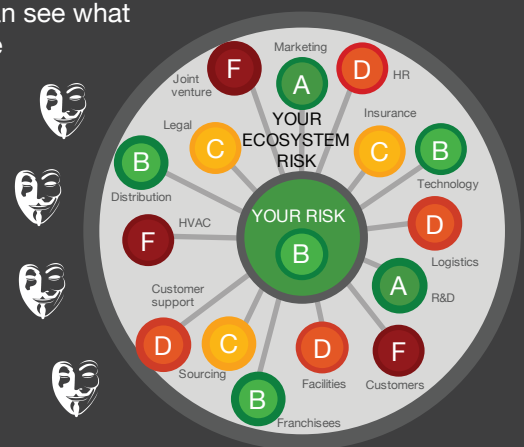

## EASILY MANAGE YOUR 3RD PARTY RISK

The NormShield scorecard profiles the cyber risk of 3rd parties like lawyers, contractors, suppliers and others who have been granted privileged access to your networks. We provide a "hacker's view" of all public-facing vulnerabilities across 20 different categories and automatically assign a letter grade for each one. It's easy to spot unnecessary risk-taking and to establish minimum security standards with NormShield. The ecosystem dashboard gives executives visibility to risk, and security teams can hold vendors to key standards.

Hackers can access your company through 3rd party vendors

Now you can see what hackers see

“Normshield was able to locate and assess vendors which no other service could. . .that scored them in the top in terms of trust of rating.”

Cyber Insurance Company

## SOLVING THE NEEDLE IN THE HAYSTACK PROBLEM

NormShield provides both depth and specificity so you can act with assurance. Other scorecards take a domain and throw back anything and everything, leaving it to you to pick out what's relevant. Or worse, they fail to thoroughly uncover all relevant domains, subdomains, and IP ranges, so you don't know what you're missing. Only NormShield lets you zero-in on the results of even the largest organizations by specific division or country of origin.

## GET A DEEPER ANALYSIS

NormShield is designed to find threats that other providers miss. Because NormShield combines the best-of-breed scanning and discovery technologies into a single system, NormShield is simply the most complete method for evaluating critical data points like:

- Attack Surface—uncover ports, services & outdated application service versions that leave you vulnerable
- SSL/TLS—conduct deep analysis and simulations to uncover vulnerabilities and misconfigurations
- Leaked Credentials—no private company has a larger library of leaked credentials. If it's been shared on the dark web, we've indexed it.
- Active vulnerability scanning—Normshield conducts true pentest reporting with a variety of scanners including Nessus.

## PRIORITIZE YOUR OWN RISK TOO

The NormShield Ecosystem Cyber Risk Scorecard enables you to manage your 3rd party risk, but what about your own enterprise risk? NormShield Cloud is a security operation and reporting platform that prioritizes your own risk and automates key workflows so remediation happens automatically.

### ABOUT NORMSHIELD

Automatically see, prioritize and act on cyber threats with NormShield. NormShield Cloud integrates robust cyber security tools into one cloud platform: unified vulnerability management, cyber threat intelligence, security operations 360°, and a risk scorecard for security executives. Data is automatically orchestrated in real-time to identify the highest risks for rapid remediation. Enterprises can assess their ecosystem risk with NormShield Ecosystem Cyber Risk Scorecards. The platform and scorecards are available with annual subscriptions, putting automated cyber threat detection within reach of all mid- and large-sized organizations.
