

Soaring Eagle

CONSULTING

PERFORMANCE MATTERS

Soaring Eagle understands that your computer application performance can affect your bottom line. Database performance is the engine that supports your client, industry and employee effectiveness and retention.

Performance and Tuning Consulting

Our Expert DBAs will review, analyze, recommend and implement changes to your database management system to optimize performance, so you can pay more attention to your critical business matters. Then you can stop worrying about your database performance. We offer this service either continually and remotely with **ONSHORE EXPERT DBAs** or at your site, by the day, week, month or through quarterly continued engagements.

Health Check

Our team will examine all of your target DBMS systems, validating versions, service packs, administration procedures, high- and low-level performance, identify likely scaling issues and recommend specific performance solutions.

Architecture Design and Planning

Architectural problems can be difficult to resolve after implementation. An architectural assessment before implementation can save you money, time and help promote client satisfaction. If you don't have the skill sets in-house, bring us in to do the work.

Scalability Assessment

Wondering if your system is going to scale? Want to make sure your design will still make sense as your business grows, call us.

System Audit/Pre-Audit

Expecting HIPAA, SarbOx or other audits? We'll tell you what your auditors are going to complain about. We examine system security, entry points, potential security issues, and compare them to industry standards, providing findings directly to you.

Migration and Upgrades

We perform migrations and upgrades between all DBMS and to alternative hardware solutions, including server consolidation.

Oracle Recovery Services

Recover data from corrupt Oracle Databases. Ask us for our separate brochure.
