

2008 DATA MANAGEMENT SOLUTIONS PARTNER OF THE YEAR-WINNER Database Management

ISI SQL Rx®

Enterprise Level SQL Expertise Encompassing:

- SQL Server Performance Tuning
- Disaster Recovery/High Availability
- Data Migration & Upgrades
- Best Practices Compliance
- Training & Mentoring
- Remote **DBA**® Monitoring

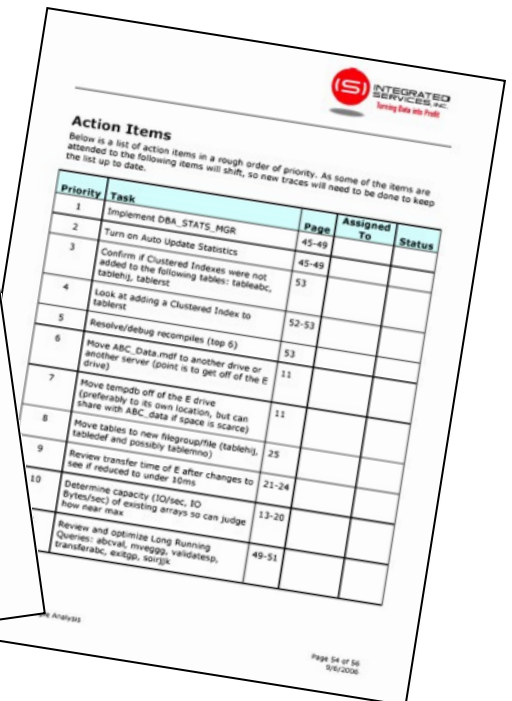

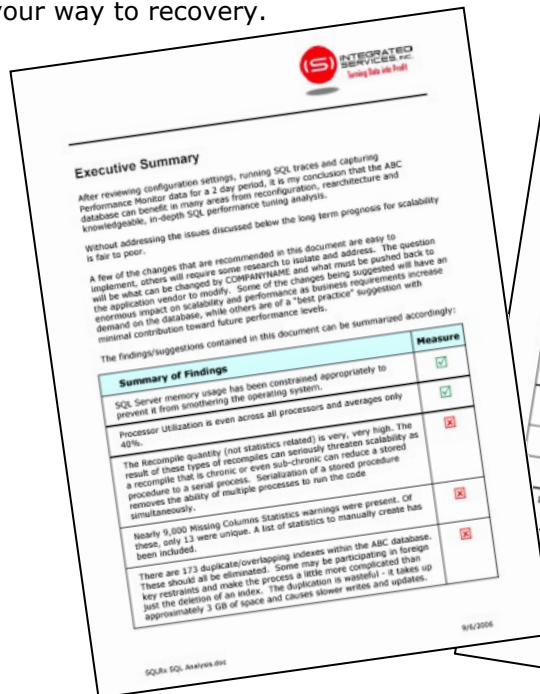

SQL Rx is powered by ISI's WinPerf® software suite to collect and uniquely correlate both SQL Server and System performance data to quickly **identify** and **decode** bottlenecks. The output is our **Assessment Report**.

Whether you need emergency, one-time assistance, help with configuration, or something more in-depth, we offer a variety of SQL Rx Assessments and service levels to suit your needs. Each assessment includes a SQL Performance Assessment Report which begins with a clear and concise, color coded **Executive Summary** to quickly get a handle on what's "good" and "bad", followed by a personalized report complete with technical information about your system. Each report includes a prioritized list of **Action Items** with corresponding cost-benefit estimates to help you on your way to recovery.

"We are extremely pleased with the results ... worked with our staff during the analysis and tuning phases ... resulted in a lot of knowledge transfer ... documentation was detailed and well organized."

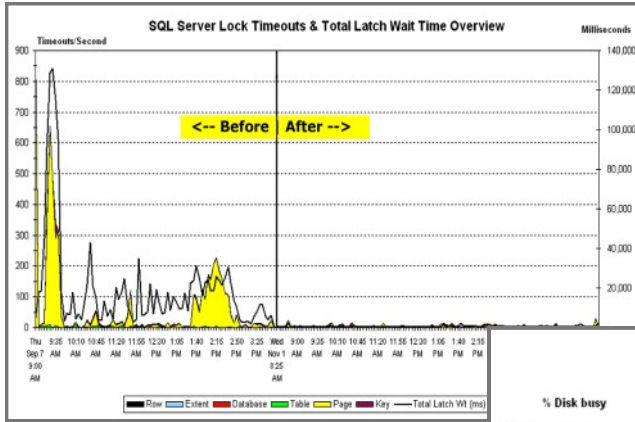

Joab Schulteis
Atlas World Group
Evansville, IN

Clear, In-Depth and Thorough Analysis. Results you can use!

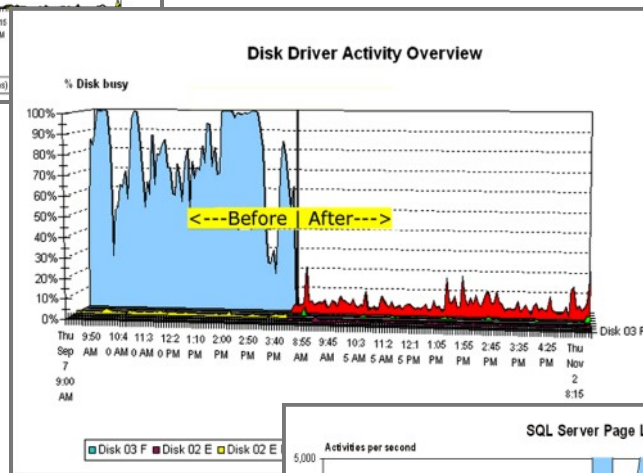

We also provide you with a **Baseline** that allows you to measure and monitor performance improvements. Look at these **actual** screen shots taken before and after SQL Rx Performance Tuning. What have you got to gain? Call us to schedule a **FREE** 15 minute **check-up!**
