

# Introducing **STAGE**

Quantitative. Multi-Contrast. Standardized. 40% Faster.

## **Enhanced Detection Examples**

**STROKE** Microbleeds, O2 Saturation

 $\overline{}$ 

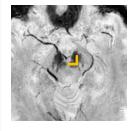

Comprehensive brain imaging in a single protocol.

Microbleeds, Vessel Shearing

TRAUMATIC

**BRAIN INJURY** 

**PARKINSON'S** SN Swallow Tail, Neuromelanin

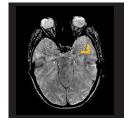

Enhanced visualization and quantification.

**MULTIPLE SCLEROSIS** FLAIR/SWI Mismatch

Standardized data, manufacturer independent.

\*STAGE has not been evaluated by the FDA and is intended for research use only

### Rapid, Comprehensive Protocol for Advanced Brain Imaging

Method	SpinTech	Conventional
MR Sequences	STAGE, T2FLAIR, DWI	TIW, PDW, SWI, DWI, T2FLAIR
Time @ 1.5T	13:14	22:37
Time @ 3T	9:30	14:27
# of Outputs	17	5

**40% Faster Scan Times** Increased patient throughput; Increased reimbursement

**Quantitative, Standardized Data** Enables biomarker quantifiction; Cross-platform

**Lower Costs** No new capital equipment; Increased efficiency

**Enhanced Imaging** Improved visualization; Automatic quantification and detection

**Improved Workflow** Reduced analysis time; Comprehensive acquisition sequence

### **Full K-Space Coverage** Full 3D Cartesian sampling; compatible with additional scan acceleration methods

### Integrated, Quantitative Post-Processing

Automated Processing Drives Rapid Insights From Rich Data

### SWI

Enhanced visualization of iron & oxygen saturation. Differentiates blood from calcium (FDA 510K cleared)

СМВ

Al tool for automatic identification of cerebral microbleeds

SWIM/QSM

Quantification of iron, calcium, and oxygen concentration

#### Segmentation

Automatic brain segmentation and volume calculation

#### **SWI/FLAIR Composite**

White matter lesion quantification and differentiation

### **Compatible With Third Party Reports**

Run your normal quantitative reports on STAGE data
