

# SharePlus

Infragistics SharePlus is the industry leading cross-platform choice for keeping your employees productive on the road while ensuring corporate data remains secure. The simple deployment and intuitive user interface eliminates any IT resource drain, as time spent configuring devices and training users is minimal.

**Your SharePoint Data in Your Hands** - The intuitive design enables you to interact with and respond to your business needs when away from your desktop, helping you glean the information and actionable metrics you need exactly when you need them.

**SharePoint Anywhere. Secure Everywhere** - Without a secure solution in place, mobile users will find their own options, putting your corporate intelligence at risk of being infiltrated. Bring the solution to your users proactively to maintain control over your SharePoint assets.

**Maximize Deployment with Minimal Effort** - Get the right settings out to your mobile users by configuring settings once and only once.

## Features

**Content Management** - Key employees can stay just as productive whether on the road or out in the field by retrieving and updating actionable intelligence in real time. Add an important meeting to your SharePoint calendar while waiting for your plane, upload a new photo taken right with your mobile device's camera, or add the latest live data to your customer presentation moments before entering a meeting.

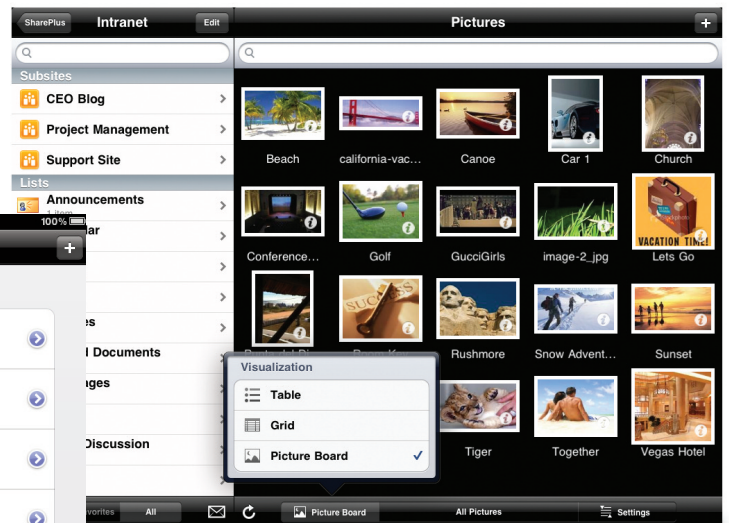

**Offline Support** - Not connected? No problem. With the auto synch and offline support features, users can store and edit locally all lists and data until connectivity can be restored.

**Security** - Multi-factor authentication, remote swipe, and passcode lock give you peace of mind that your corporate intelligence remains locked down on mobile devices.

**Configuration Broadcast** - With SharePlus Enterprise, IT Managers can save time and resources by eliminating the need for individually buying and configuring SharePlus on each mobile device. Increase efficiency by configuring settings only once, then pushing those settings to all corresponding devices.

## Performance

Your business productivity shouldn't diminish when access to wireless networks does. SharePlus is your best choice when you need to stay productive while away from your desk, regardless of connectivity. SharePlus is the only enterprise mobile SharePoint application available for iPhone, iPad, Android, and Blackberry, which means your users can continue to work from the mobile device they are most comfortable and efficient with.

SharePlus: The universal mobile SharePoint app

Check out [SharePlusApp.com](http://SharePlusApp.com)

Is there a way to be more productive in SharePoint on my tablet than I can in my browser?

How can I deliver a secure mobile SharePoint solution once – across the enterprise – not once for each device?

Thanks to the SharePlus app, I synched my proposal to SharePoint while boarding, received home office approval in flight, and e-mailed the final to the client at baggage claim. **Closed the deal right on my iPad with less hassle than getting through the TSA Checkpoint.**
