# ComponentOne®
Studio® for SharePoint

DATAGRID

CHART

MAPS

MAKING SHAREPOINT EASY... ONE WEB PART AT A TIME

ComponentOne Studio for SharePoint contains three Web Parts that connect to all popular data sources and display them in grid, chart, and map form. They are the only Web Parts that give you a point-and-click interface to select the data sources and completely configure how the data is displayed. The design experience is not only fast, but doesn't require developers. Imagine having the power to create impressive data-based portals in minutes, without writing any code!

ComponentOne's Web Parts are available individually or bundled in a Studio.

ComponentOne® DataGrid™ for SharePoint

Show and edit data from any source without any special setup. Support hierarchical data, filtering, sorting, grouping, and editing without code. Customize columns with formats, display images and hyperlinks. Scroll quickly through large data sets without page refreshes or post-backs. Allow users to personalize their views and see exactly what they want, the way they want. Do all this in minutes, without writing a single line of code.

ComponentOne® Chart™ for SharePoint

If you know how to create charts in Microsoft Excel, then you know how to use our charting control. It's that easy. Navigate to any data source, choose the table, and instantly obtain stunning charts with professionally designed styles. Customize the appearance further with the easy-to-use On-Board Designer or allow your users to personalize their charts (so you don't have to).

ComponentOne® Maps™ for SharePoint

Do you have geographical data? You don't need longitude and latitude data, simple addresses will do. With Maps for SharePoint, you can show where your customers and suppliers are, track shipments, show branch productivity, or display anything location-related. Assign images and associate actions with each data point, so your users can zoom, pan, and drill down to see information in whole new ways. Do all this in minutes, without writing a single line of code.

ComponentOne Web Parts vs. SharePoint Out-of-the-Box and the Competition:

	ComponentOne Studio for SharePoint	SharePoint	Competition
Point-and-Click Designers	✔		
Connect Directly to SQL Server	✔		✔
Connect Directly to Oracle	✔		
Connect Directly to Excel	✔	✔	
Connect Directly to SharePoint Lists	✔	✔	✔
In-place Charting (without going into page edit mode and without Excel)	✔		
Mapping (plot data on live maps)	✔		✔
Inter-connect Web Parts	✔	✔	
Instant Filtering (without page reload)	✔		
Drag-and-Drop Sorting	✔		
Drag-and-Drop Grouping	✔		
Master-Detail Relationships	✔		✔
Scroll Full Dataset	✔		✔
Edit Data from All Sources (Lists, Excel, SQL Server, Oracle)	✔		✔

Web Parts At-a-Glance

Our Web Parts are consistent across the entire Studio to provide maximum value, efficiency, and usability. Here are the most popular reasons why people choose ComponentOne Web Parts:

- Point-and-click "On-Board Designers" allow you to select data sources and configure the Web Parts without writing any code. Nothing could be easier.

- Connections to SharePoint lists, SQL Server, Oracle, and Excel are direct (no code or third-party tools are needed).

- Interactive data-based portals are a click away. Just connect Web Parts to each other.

- Advanced users can take advantage of the built-in coding interface to customize the Web Parts even further if required.

- Web Parts can be used in Windows SharePoint Services (WSS) and Microsoft Office SharePoint Server (MOSS) sites.

> " I think your Web Parts are a big step forward in empowering end-users/power-users to exploit the SharePoint platform, without having to become a developer. "
>
> - Panayotis Tzedakis (CTO, NetHabilis)
