1 JJVC data on file. Astigmatic coverage in Low Minus (-0.75, -1.25, -1.75DC across all axes in 10° increments) accommodated with ACUVUE® VITA® for ASTIGMATISM.

2 JJVC data on file 2017. Family Claims for ACUVUE® VITA® Brand Contact Lenses;

**Class 1: Must transmit less than 10% (<10%) of UVA and 1% (<1%) of UVB. UV-blocking percentages are based on an average across the wavelength spectrum.

† Helps protect against transmission of harmful UV radiation to the cornea and into the eye.

* WARNING: UV-absorbing contact lenses are NOT substitutes for protective UV-absorbing eyewear such as UV-absorbing goggles or sunglasses because they do not completely cover the eye and surrounding area. You should continue to use UV-absorbing eyewear as directed. NOTE: Long-term exposure to UV radiation is one of the risk factors associated with cataracts. Exposure is based on a number of factors such as environmental conditions (altitude, geography, cloud cover) and personal factors (extent and nature of outdoor activities). UV-blocking contact lenses help provide protection against harmful UV radiation. However, clinical studies have not been done to demonstrate that wearing UV-blocking contact lenses reduces the risk of developing cataracts or other eye disorders. Consult your eye care practitioner for more information.

‡ Units: x 10⁻⁹ (cm/sec) (mL O₂/mL x mm Hg) at 35°C Fatt (polarographic, boundary and edge-corrected).

ACUVUE® VITA® Brand Contact Lenses are indicated for vision correction as a daily wear lens with one-month recommended replacement. As with any contact lens, eye problems, including corneal ulcers, can develop. Some wearers may experience mild irritation, itching or discomfort. Lenses should not be prescribed if patients have any eye infection, or experience eye discomfort, excessive tearing, vision changes, redness or other eye problems. Consult the package insert for complete information.
