Time to move from tape backups.

Tape backup has been a proven storage media for many years and it's likely that this market will continue to grow another 11% in the coming year. Unfortunately, for many, tape backup has proven itself to be inefficient, time consuming and in many cases a potential liability.

In today's business world, data is the blood that allows every organization to take the next step forward. When data is compromised, forward motion stops. This is just one reason why companies need to focus on their recovery time objectives (RTO) to meet any unforeseen data loss. All technologists know that data loss equals a loss in productivity and revenue.

2GB of data is lost every minute of everyday.

Ontrak

Data Loss

Regardless of whether your units of measure are megabytes, gigabytes or terabytes every business has its challenges when data is unprotected.

Every company needs to be aware that even nominal amounts of data loss can be damaging. The loss of data could be as simple as a deleted file or as large as a natural disaster. But remember there are always those power surges, viruses and possibly a disgruntled employee that could cause data to go missing.

43% of US businesses never reopen after a disaster & 29% more close within 2 years.

US Small Business Administration

Visiting Technology

As a long standing innovator in the backup business, United Computer Group (UCG) wants to help you get your business up and running as quickly as possible in case of data loss or disaster. We have been in business for over 23 years and we know every company has different needs and pain. Thus, each of you has your own unique reason for choosing the best solution to fit your business. We feel that off-site encrypted backup technology like VAULT400 is the best approach, but it may not be the total solution. Organizations that have moved to paperless offices know a recovery point objective (RTO) may be the determining factor for choosing a high availability solution (HA). The following options are just a few of several offered by UCG.

93% of companies that suffer significant data loss are out of business within 5 years.

US Bureau of Labor

VAULT400

Vaulting, Hardware DR and Replication

VAULT400 backs up an entire organization's business-critical data to one of VAULT400's secure redundant data centers. The data is encrypted and available 24 hours a day 7 days a week for immediate online recovery.

VAULT400's disk-to-disk backup and recovery services are architected and provisioned to help customers enhance their business continuity programs, improve data security practices and maintain compliance for applicable industry regulations.

VAULT400 has a wide breadth of support: System i (AS400), Windows, Linux and many other various platforms and applications.

<u>SaaS Managed Service Vaulting</u>	<u>Plug-n-Protect Appliance</u>	<u>Licensed Software Vaulting</u>

Vaulting Sounds Right for Our Organization

SaaS Managed service vaulting is a great solution for any sized organization. However, it fits well with those with 5GB to < 500GB of compressed data. When data is encroaching 500GB of compressed data many companies look to the Plug-n-Protect appliance and direct licensing. An

Appliance and Licensing of the software provides an array of possibilities in architectural layout and the ability to save costs when vaulting a large amount of data.

Vaulting Architecture

Vaulting relies on network connectivity to our secured data center, so data can be backed up from any location. With the use of bandwidth throttling, background transfers have helped customers achieve backup independence. Quick backups accomplished using LAN and WAN with end-to-end encryption.

Hardware Disaster Recovery with VAULT400 DR

VAULT400 optionally offers System i hardware recovery. If a disaster strikes, VAULT400 can have you back in operation in 24 or 12 hours. And for those that require a one-hour RTO, we can meet those needs with our High Availability Managed Service. Just select the required RTO and VAULT400 will present a complete offering to meet your needs.

Replication (HA) by MAXAVA

Maxava (Maximum Availability) is a cost-effective High Availability and Disaster Recovery software replication solution provider. They have created the Maxava HA Enterprise Suite of products. HA created with the expressed desire to take advantage of the latest features of System i technology – in particular the rapidly expanding realm of OS/400 Remote Journaling - Maxava has demonstrated its speed, reliability, and ease-of implementation.

All of the products in the Maxava Suite integrate seamlessly and quickly with your existing technology. Installation is rapid, ease-of-use assured and dependability absolute. How can thousands of installations in over 30 countries be wrong?

Minimize downtime with VAULT400

VAULT400 offers you a myriad of choices to keep your data safe and secure. Whether you have 10GB of data or 100TB+ of data we have a solution that fits your needs. Keep your business running with minimal downtime in the case of a disaster with VAULT400. **CALL 1-800-211-8798 for additional information or a quote, please forward your request to info@ucgrp.com or www.vault400.com**
