

# Failure is NOT an option in ANY economy

## Reduce Risk While Reducing Cost

- Automate Multi-Site Recovery
- Optimize Data Replication to enable Windows Server® Multi-Site Clusters
- Enable Hyper-V™ disaster recovery
- Migrate Hyper-V VMs with or without shared storage

SteelEye® Technology and Microsoft® are offering a joint disaster recovery solution for virtualized environments based on SteelEye DataKeeper® Cluster Edition, the only Microsoft multi-site cluster solution certified for Windows Server 2008. This blending of capabilities affords companies worldwide a distinct advantage in facing the challenge of sustaining and protecting their IT resources during tough economic times. Having the ability to seamlessly move physical or virtual workloads within the data center or to remote locations is a proven and highly reliable method of protecting applications and data.

SteelEye DataKeeper and Microsoft Windows Server® 2008 is THE ONLY solution for your business continuity or disaster recovery needs. It will minimize the impact of outages and guarantee your applications and data are available in the event of planned events or a catastrophic site loss.

**Replicate Any Data.**  
**Protect Any Application**
