the world's largest provider of imaging SDKs and viewers

Barcode Xpress
1D and 2D barcode recognition SDK

FormFix
structured forms processing
and OMR SDK

ImageGear
multi-platform document, medical,
and photo imaging SDK

ImageTransport MD
DICOM Communications SDK

ImagXpress
speed-optimized document
and photo imaging SDK

ISIS Xpress
high-speed ISIS scanning SDK

MICR Xpress
MICR recognition SDK for check
processing applications

NetVue
browser-based client/server
document viewer

PDF Xpress
high-level PDF and PDF/A SDK

PICTools
image compression & editing SDK;
low-level and multi-platform

PICVideo
the fastest video codec

Prizm Viewer
browser-based, client side image viewer

ScanFix Xpress
superior scanned image cleanup SDK

SmartZone ICR/OCR
text & handprint recognition SDK

FormSuite Pricing Bundle
a forms application development suite that includes the FormFix & SmartZone ICR/OCR SDKs

your single source for
imaging SDKs and viewers

Whether you're building new applications or enhancing existing workflows, our SDKs get you there faster. We deliver superior imaging functions for your applications. Our engineers are constantly pioneering advancements and refining solutions for scanning, image conversion and cleanup, forms processing, recognition of text and barcodes, and other image processing functions.

Our SDKs are available for multiple development environments on multiple platforms. Plus we give you free, unlimited trial downloads and very generous support from our in-house software engineers.

Accusoft Pegasus has your back with reliable code that always delivers. Image on.

Scan, view, convert, enhance, process forms – anything that can be done with a document image can probably be done faster and better using industry-leading Accusoft Pegasus SDKs. When you're looking for imaging software development kits to build document imaging, forms processing, or enterprise content management applications, start here.

[scanning]

Gain complete control over high-speed scanning processes. Control almost any scanner's user interface, support bitonal and color scanning, and easily add support for multi-streaming, duplex modes, and device negotiation. SDKs are available for both TWAIN and ISIS.

[compression]

Accusoft Pegasus delivers optimized, standards-based compression technologies, including TIFF, PDF, PDF/A, JBIG2, JPEG 2000, JPEG, and more. Our libraries give you faster compression/decompression and higher-quality images, with unmatched support and continuous improvement. Compression SDKs are available across multiple environments and platforms.

[PDF]

Incorporate PDF and PDF/A support into your applications. Easily create searchable text PDFs from scanned TIFFs. View PDF files, create new PDF documents, modify and reorganize existing PDF documents, edit metadata, add bookmarks, and more.

[editing / cleanup]

Improve content recognition results, on bitonal on color images, by adding the most powerful document image cleanup available to your application. Advanced document image cleanup features include binarization, anti-aliasing, line removal, despeckle, deskew, and more.

[forms processing]

Scan in forms, enhance and clean up scanned images, match scanned forms to those in your master form library, clip fields of hand-printed or typed text, check marks, or bubble marks, drop out the form background, perform OCR, ICR, or OMR, and pass it on to your document processing application.

[OCR]

Recognize and extract content from scanned documents. Easily add accurate machine-print and hand-print recognition, including OCR, ICR, OMR, and MICR, to your applications. Accurate zonal text recognition and pattern-matching excel with forms processing. Powerful full-page OCR enables document indexing, archiving, and e-discovery.

[barcode]

Add high-speed and accurate barcode recognition and creation to document scanning, processing, indexing, and archiving applications. Read and write 1D barcodes, including 4-state postal codes, and take advantage of support for 2D barcodes, including QR Code, PDF417, Datamatrix, and Aztec.
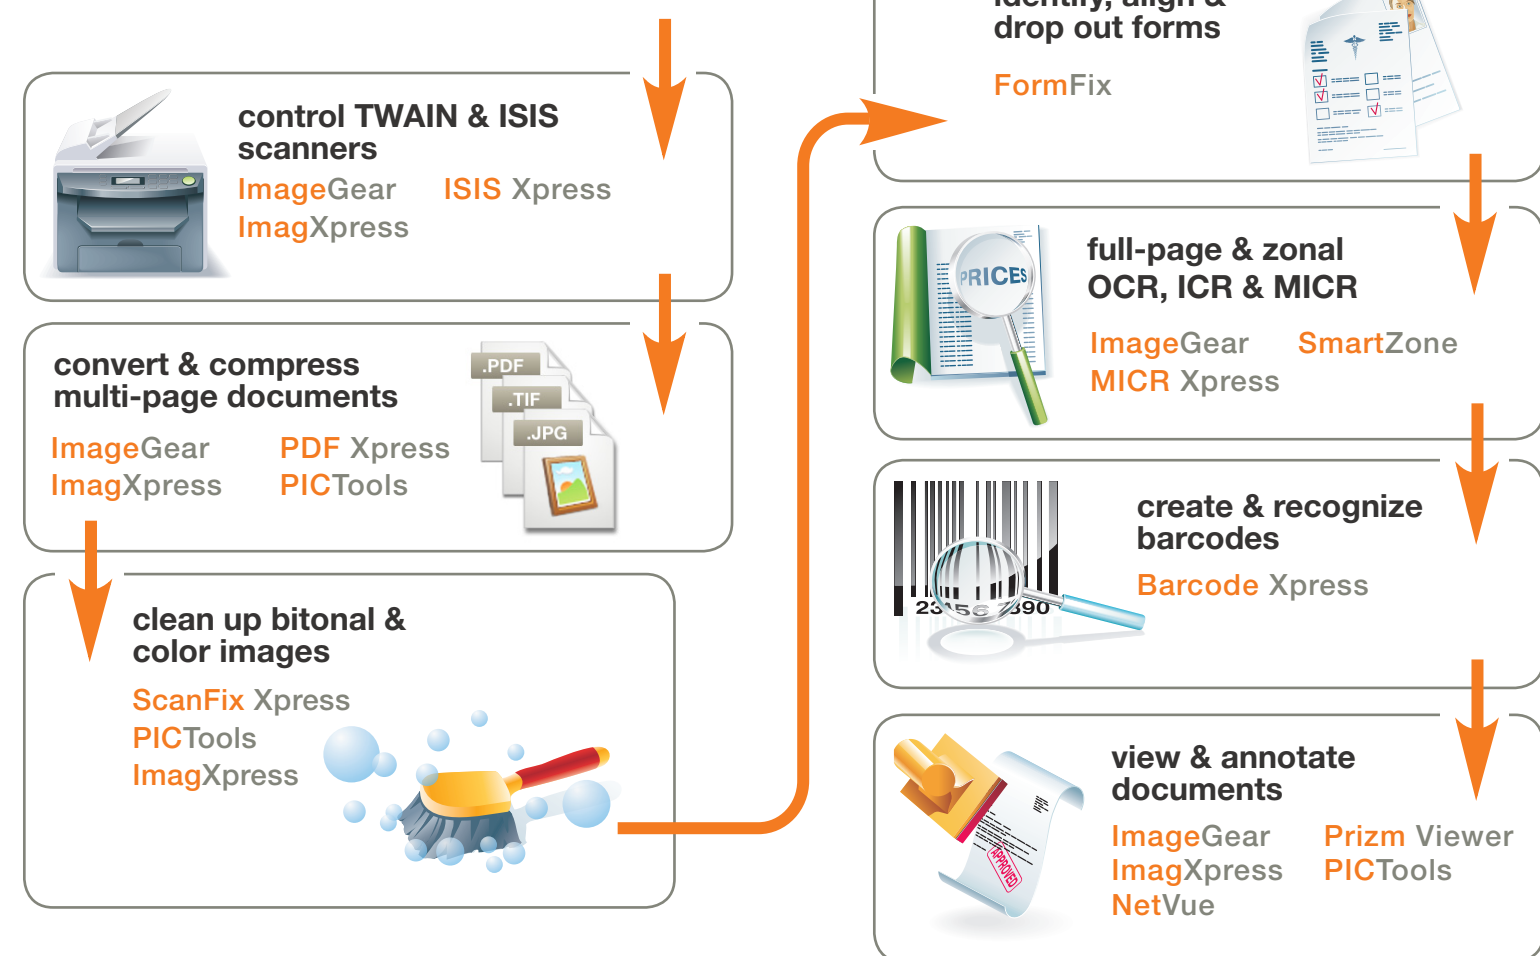

[viewing]

Browser-based viewing solutions and SDKs offer extensive customization capabilities and superior speed and features. Deliver document images from your ECM or DMS solution to end users via the Web and include annotation tools for collaboration. We support TIFF, PDF, JPEG, JPEG 2000, and much more.

[medical DICOM]

With full support for the DICOM format, and access to the DICOM dataset, Accusoft Pegasus medical imaging SDKs have been leveraged for more than a decade to help build world-class healthcare applications, including PACS, teleradiology, ultrasound, and cardiology applications. They provide support for both lossy and lossless DICOM-compliant formats, including 8-bit through 16-bit grayscale.

control TWAIN & ISIS scanners
