

Symantec™ Protection Suite Enterprise Edition

Trusted protection for endpoint, messaging, and web environments

Overview

Symantec™ Protection Suite Enterprise Edition creates a protected endpoint, messaging, and web environment that is secure against today's complex malware, data loss and spam threats, and is quickly recoverable in the event of failure. Reduce the cost of securing your environment and more effectively manage the inherent risks of today's IT infrastructures with proven Symantec endpoint security, messaging security, and system recovery technologies.

Symantec Protection Suite Enterprise Edition is an unparalleled combination of award-winning technologies from the world leader in security and data protection that enables you to completely protect, easily manage, and automatically control the assets most crucial to your business.

Endpoint security

More than antivirus

Symantec Protection Suite delivers more than world-class, industry-leading antivirus and antispymware signature-based protection. It provides advanced threat prevention that protects your endpoints—laptops, desktops, servers, and mobile devices—from targeted attacks and attacks not seen before. It includes turnkey, proactive technologies that automatically analyze application behaviors and network communications to detect and block suspicious activities, including administrative control features that allow organizations to deny specific device and application activities deemed as high risk.

In addition, the new suite features built-in software-based network access control to ensure endpoints remain in compliance with IT policy, regardless of where or how they connect to the network.

This multilayered approach significantly lowers risk, providing confidence that business assets are protected. The endpoint security of Protection Suite Enterprise Edition includes these capabilities now, with the ability to enable individual components as needed.

Messaging and Web security

Antispam, messaging, and web security protection

Symantec Protection Suite provides effective and accurate antispam and antivirus protection for both inbound and outbound email and instant messaging (IM). The Protection Suite messaging security components can be deployed both at the messaging server level on Microsoft®

Exchange and Lotus Domino®, and at the gateway level with physical or virtual appliance-based security. Advanced content filtering and data loss prevention help organizations control sensitive data, reduce the risks associated with data loss, and meet regulatory compliance and corporate governance demands. The Protection Suite messaging security is simple to administer and catches more than 99 percent of spam with less than one in a million false positives. Continuous automatic updates, global and self-learning local IP reputation analysis, and comprehensive reporting ensure that the Protection Suite effectively and transparently responds to new spam threats. This minimizes network downtime and preserves employee productivity.

Backup and recovery

Full system and data recovery

Symantec Protection Suite extends its system protection to include disk-based system recovery for Microsoft® Windows based desktops and laptops which enables businesses to recover from system loss or disasters in minutes, not hours or days — even to dissimilar hardware platforms, to virtual environments, or in remote, unattended locations. It centrally manages backup and recovery tasks for multiple desktops and laptops across the entire organization.

Key benefits

Protect completely

Multi-layer protection from endpoint to gateway

Deploy proven technologies. Protect with confidence with the market-leading endpoint security, messaging and

Web security, data loss prevention, and system recovery vendor.

Protect against more threats. Secure your environment against data loss, malware, spam, botnets, and other Web 2.0 threats by accurately identifying and addressing risks consistently across different platforms.

Protect end-to-end. Protect at the endpoint, messaging server, and web and messaging gateways proactively with more than traditional antivirus and antispamware.

Safeguard intellectual property. Secure sensitive data and valuable confidential information at the gateway with advanced content filtering and data loss prevention.

Rely on trusted research. Protect proactively with real-time security intelligence that provides early threat warnings and protection from newly evolved threats.

Rapidly recover with ease. Recover individual files and folders in seconds, or complete Windows systems in minutes reliably and with confidence, even to dissimilar hardware or virtual environments—now including support for Windows 7.

Manage easily

Unified management and administration

Simplify implementation & operations. Quickly deploy with minimal disruption to your environment through easy management and optimized utilization of system resources.

Manage with ease. Streamlined management with optimized workflows for critical security tasks, freeing administrators and end-users from unproductive tasks.

Flexible and scalable configuration. Meet IT policy requirements with granular control over policies and features which are easily configurable and selectively deployable.

Eliminate environment complexity. Deploy integrated essential endpoint and messaging security technologies as unified solutions with coordinated management.

Streamline processes. Eliminate additional steps and costs with one decision, one purchase, and one vendor for complete protection.

Centrally manage backup. Manage physical to virtual conversions, off-site copy capabilities and backup destination monitoring from a central location.

Reduce Operational Costs. Reduce the time, cost, and expertise needed to manage multiple technologies.

Control automatically

Automatic backup and recovery, monitoring, updating, and enforcement

Ensure Compliance. Achieve, prove, and enforce adherence to IT policy and regulatory objectives with ease.

Regulate sensitive information. Identify and control the flow of sensitive information via email and IM, as well as on to and off of endpoints.

Effortlessly update. Adapt to risks faster and take action within minutes with the Symantec Global Intelligence Network, one of the largest security research networks in the world.

Gain increased visibility into your environment. Provide increased visibility into actions, events, and status from endpoints and messaging infrastructure with insightful reporting.

Minimize Downtime. Get your business systems back up and running quickly by restoring from both event-driven and scheduled recovery points.

Key features

Antivirus and antispyware. Provides unmatched, best-of-breed malware protection, including market-leading antivirus protection, enhanced spyware protection, new rootkit protection, reduced memory footprint, and new dynamic performance adjustments to keep users productive.

Network threat protection. A rules-based firewall engine and Generic Exploit Blocking (GEB) block malware before it can enter a system.

Proactive threat protection. Protecting against unseen threats (i.e. zero-day threats), it includes TruScan Proactive Threat Scan, which does not rely on threat signatures.

Single agent and single management console. Antivirus, antispyware, desktop firewall, intrusion prevention, device and application control, and network access control are all in a single agent — managed by a single management console.

Antivirus for Linux, Mac, and Windows Mobile. Remove viruses from email attachments, Internet downloads, and other sources to safeguard the enterprise network. Enables secure mobile computing by providing comprehensive virus protection against malicious threats that target Windows Mobile operating systems.

Antispam and messaging security protection. The Symantec Brightmail-based antispam technology delivers greater than 99 percent effectiveness and a false positive rate of less than one in a million, making it one of the industry’s most accurate solutions.¹

- Scans inbound and outbound email for compliance with regulatory and governance requirements
- Provides incident management and reporting capabilities that enable organizations to implement policies and analyze and manage violations
- Continuously delivers automatic spam signature updates and reputation scoring to help ensure effective, real-time protection against new threats
- Offers unparalleled protection, as evidenced by the industry’s only record of over 40 consecutive VB100 awards, since 1999
- Provides real-time analytics and reporting, gaining visibility into email and IM usage and growth patterns
- Supports virtualized Exchange environment

Web Security. Protect against Web 2.0 threats, including spyware, botnets, viruses, other types of malware, and provides control for Web and application use.

- Fast protection at the Web gateway across multiple protocols for inbound and outbound Web traffic
- Protects against malware threats on all Web 2.0 file transfer channels
- Inspects, detects, and blocks active and dormant botnets

System recovery. Enables rapid, reliable recovery of computer data and systems.

- Create while-you-work backups of the entire system, without disrupting user productivity
- Home page view immediately identifies the backup status of computer systems
- Run backups automatically when the Symantec ThreatCon level reaches or exceeds the level you specify
- Centrally manage backup and recovery tasks for multiple desktops and laptops across the entire organization

Services

Symantec offers a range of consulting, technical education, and support services to guide organizations through the migration, deployment, and management of Symantec Protection Suite and help realize the full value of your investment. Essential Support Services provide confidence that critical assets are protected around the clock. For organizations that want to outsource security monitoring and management, Symantec also offers Managed Security Services to deliver real-time security protection.
