

LiteSpeed® for SQL Server

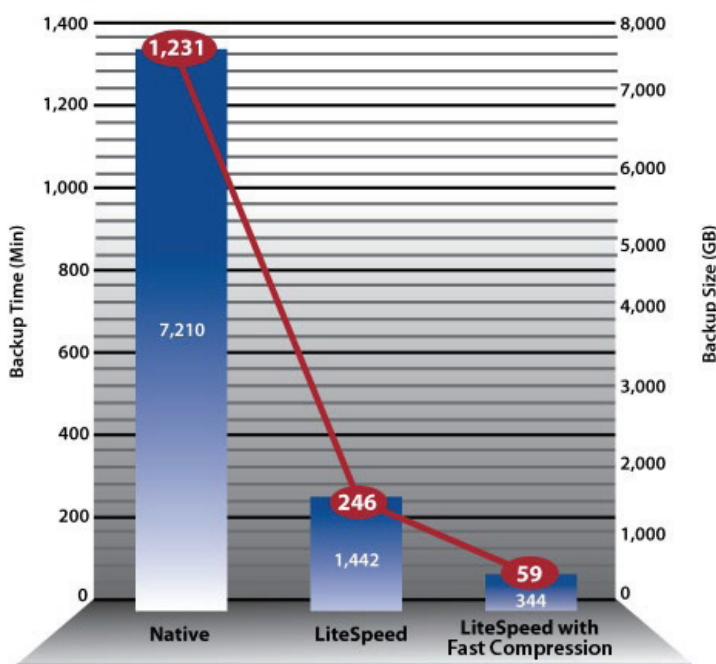

The Industry's Fastest, Most Flexible Database Backup and Recovery Solution

LiteSpeed® for SQL Server is a fast and flexible backup and recovery solution that allows DBAs to easily maintain complete control over the backup and recovery process. Its low-impact, high-performance compression technology enables users to reduce storage costs, as well as decrease the number of SQL Server backup and recovery windows.

With its latest Fast Compression technology, LiteSpeed for SQL Server's compression ratio jumps from 20:1 up to 40:1 over native compression. The result is a unique backup and recovery approach, unmatched in flexibility, that greatly reduces backup times, creates a significantly smaller storage footprint, and maintains a high level of recoverability.

LiteSpeed provides an enterprise view of the backup and recovery environment through an intuitive user interface, scripting backup and recovery commands via T-SQL, or a fully functional command line executable. LiteSpeed offers flexible backup and recovery options, including restoration of individual database objects, simple data migration to any SQL Server, and allows for enterprise-wide deployment and upgrades through its remote installation capability.

LiteSpeed with Fast Compression vs. Native

BENEFITS

- Compresses backups up to 40:1 over native compression with the latest Fast Compression technology
- Includes nine levels of embedded encryption
- Restores data down to the table, row and object level (i.e. tables, stored procedures and views)
- Provides the ability to attach documentation to backup files
- Reduces the size of log backups and increases the speed of log transfer
- Attaches documentation automatically to archived files
- Creates and restores database backup files through a simple double click
- Provides backup and recovery support for SQL Server 7, 2000, 2005, and 2008

"I've relied on LiteSpeed for six years to achieve what I already considered substantial time and disk savings for backup and recovery. I'm excited that Quest has introduced new technology that takes this to a whole new level, and continues to add even more value to a tool that helps me do my job more efficiently and instantly saves my organization money."

—Thomas LaRock,
Database Administrator at a
financial services company

LiteSpeed for SQL Server Features and Benefits:

Fast Compression: Reduces backup sizes substantially for unparalleled storage savings and decreases backup times significantly from hours to minutes while allowing users to maintain a high level of recoverability without compromising security.

Backup Analyzer: Allows users to test LiteSpeed parameters and backup locations, expanding tuning capabilities with just a few clicks.

Encryption: Offers nine embedded encryption levels that are applied to data concurrent with the backup process.

Database Categorization: Categorizes databases according to user specifications (PROD, DEV, TEST). It also allows user to define categories and to choose desired global views.

Centralized Reporting: Supplies convenient, consolidated reports. Users can avoid checking each server one by one for failures by creating a single report.

Double-Click Restore (exclusive): Allows users to create a database backup file that can be restored simply by double-clicking the backup file. Users can create portable backup files and further reduce restore times in a disaster recovery scenario. LiteSpeed is the only SQL backup solution to offer this feature.

Log Shipping Management: Allows users to easily configure and visually monitor both LiteSpeed and native log shipping plans.

Log Reader: Recovers data stored in transaction log files by rolling back any operation and reconstructing transactions.

Object Level Recovery: Allows users the flexibility to restore individual objects from LiteSpeed and native backup files. Users can restore tables, schema and rows.

Attached File Backup: Enables users to attach relevant documentation to their database archives. Attached files can be restored individually or along with the database as part of the recovery operation. LiteSpeed is the only SQL backup solution to offer this feature.

Backup Mirroring: Allows users to write a single backup to multiple locations simultaneously.

Tivoli Storage Manager (TSM) Integration: Schedules jobs and builds maintenance plans that can write directly to TSM without the need for an additional agent.

LiteSpeed Engine for SQL Server: Provides flexible compression and encryption, and easily fits into an existing backup and recovery strategy.

About Quest Software, Inc.

Now more than ever, organizations need to work smart and improve efficiency. Quest Software creates and supports smart systems management products—helping our customers solve everyday IT challenges faster and easier. Visit www.quest.com for more information.

SYSTEM REQUIREMENTS

Minimum Requirement:

Operating System:

- Windows 2008
- Windows 2003
- Windows 2000 (Service Pack 4)
- Windows 7
- Windows XP
- Windows Vista

Database Server:

- SQL Server 2008
- SQL Server 2005
- SQL Server 2000
- SQL Server 7.0 (Service Pack 4)
