

Strengthening Authentication to Adapt to Changing Circumstances®

Presented By Stephanie Urquhart
Internal Sales Assistant, PistolStar Inc.

What is PortalGuard?

- PortalGuard is an authentication and security solution that allows end-users to securely authenticate and manage their portal login credentials directly from a Web browser, while providing administrators with functionality to meet or exceed their security objectives.
- PortalGuard supports multiple platforms and portals including Websphere/WebSphere Portal, SharePoint/IIS, and Lotus Domino.

Why Use PortalGuard?

PortalGuard is *the* solution for confronting your security challenges:

- Achieve Stronger Authentication
- Reduce Risk - Security and Financial
- Enhance Compliance with Security and Industry Standards
- Deliver Effective Password Policies

Does this describe your environment?

- Growing number of Web and enterprise applications raising the number of password stores and sets of password policies you need to manage.
- Keeping up with the speed of business entails providing globally and remotely-based employees, customers, partners and vendors with streamlined access to corporate intranets and extranets.

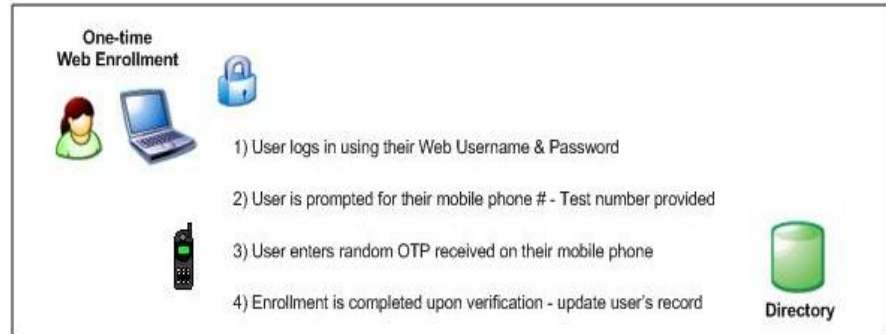

Many Configurable Password and Authentication Features...

- **Self-service Active Directory Password Reset and Recovery**- Highly configurable and secure challenge question and answer functionality
- **Single password using Microsoft Active Directory** - Have fewer passwords to remember and manage
- **One-time password (OTP)** - Offers a strong two-factor approach to authentication
- **Verbal authentication to the help desk** - By providing highly configurable challenge question and answer functionality
- **Prevent multiple users from logging in with the same credentials**
- **Define strike-out limits by person, group or hierarchy** - Alerts are emailed when strike-out limits are exceeded
- And many more...

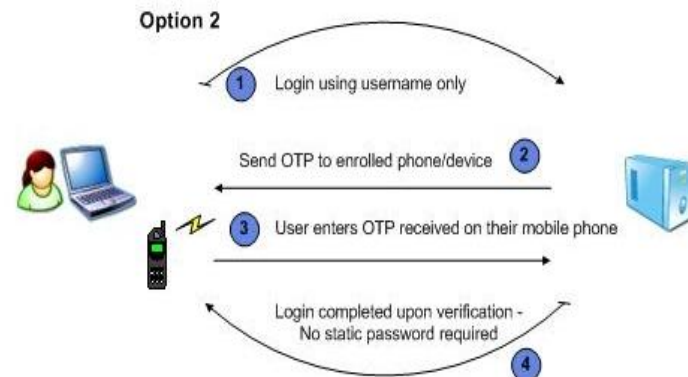

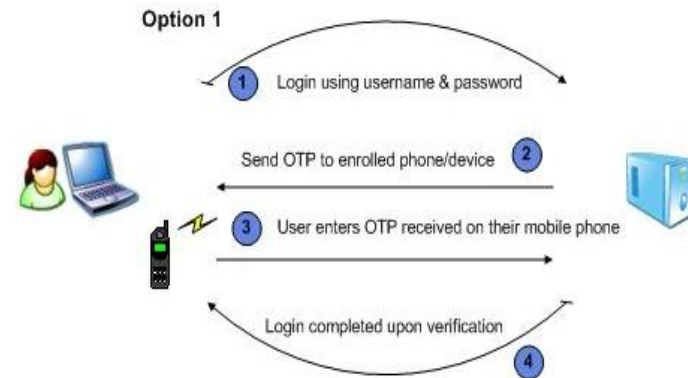

A Technical Look At... One-time Password (OTP) Functionality

Stronger Authentication using One-time Password (OTP)

Two configurable uses

An Overview Of...

Benefits for Multiple User Groups:

- For End-Users - Maintaining Productivity
- For Administrators - Avoiding Increased Help Desk Calls
- For Management - Stopping Hackers in Their Tracks
